I currently serve in the capacity of Chief of the Division of Vascular Interventional Radiology, Department of Radiology at University of Texas Southwestern Medical Center, Dallas. I have been in this position since May 2013. In this capacity, I lead a group of 12 faculty members, 4 advanced practice providers and 3 fellows to provide specialty clinical care at University Hospitals and Parkland Hospital, teach trainees in the field of Radiology and Interventional Radiology, and conduct both clinical and basic science research at these institutions. In addition, I work closely with hospital management in advancing a collaborative atmosphere in providing adequate pre-procedure, intra-procedure and post-procedure care, in-patient care and outpatient services at both hospitals.

My clinical areas of interest focus on pulmonary vascular disease, venous thromboembolism, management of portal hypertension and trans-arterial therapies for hepatic malignancies. I am considered one of the leading clinicians and researchers in these fields. I have published more than 100 original papers, edited two text books and authored more than 50 book chapters. During these endeavors, I have collaborated with distinguished clinicians, researchers and scientists of various specialties to advance the science and clinical care. As an educator, I have held positions to lead training programs, teaching conferences for trainees in Radiology and Interventional Radiology. I take pride in educating future generations of clinicians with utmost focus on vascular diseases, vascular imaging and vascular interventions. My lectures and bedside teachings are well appreciated and I am honored with one of the prestigious awards for teaching – Dr. Athansoulis Award for Excellence in Teaching at Massachusetts General Hospital. In addition to regular didactic and case review sessions, I have given lectures at various national and international conferences and symposia.

Being in the forefront of Interventional Radiology, I have transformed the way this specialty is practiced at UT Southwestern. Given my strong background in imaging and clinical medicine, I have improved Interventional Radiology presence to provide outpatient and inpatient services for longitudinal patient care. I was instrumental in bringing varicose vein therapy program to UTSW. In addition, I have introduced intranodal lymphangiography, thoracic duct embolization, balloon occluded retrograde venous obliteration for gastric varices, thrombolysis for portomesenteric venous thrombosis, advanced techniques for removal of inferior vena cava filters and use of newly designed vascular plugs for pulmonary arteriovenous malformations. These additions have resulted in increased recognition of the specialty and more choices for patient care. I have fostered more collaboration with UTSW transplant team, hepatology team, and cancer center for better utilization of interventional radiology services. In addition, my active involvement and collaboration with pulmonary service resulted in well recognized service for Hereditary Hemorrhagic Telangiectasia patients. Currently, we are one of the largest HHT centers in the US. I have supported and improved clinical services in treating liver tumors through state of the art drug delivery methods and trans-arterially delivered radiation particles. My clinical services are well appreciated both in this institution and at my prior institution where I received “Outstanding Service Award” for my tenure at Massachusetts General Hospital.

Research is an integral part of our service. We are actively involved in both industry-sponsored and investigator-initiated clinical trials. I have received funding both from the industry and NIH for clinical research. As a division, we have supported young faculty members and residents in pursuing research in interventional radiology. We fostered more growth with Cancer Center and have at least four clinical trials that involve cancer patients. We are part of an NIH trial for mutation analysis of tumors.

I have worked closely with our department leadership team in bringing the Interventional Radiology residency program to the department. This provides a direct pathway for medical students in pursuing career in IR that focuses on training in both imaging and advanced clinical care. During this process I have worked closely with the Vascular Surgery division for identifying avenues for additional training for residents in their specialty.

As a leader in the field of interventional radiology, I serve on the editorial board of many journals both as a reviewer and editor. I work closely with leadership in the Society of Interventional Radiology and American College of Radiology in advancing clinical care through guidelines and setting trends in training future radiologists. I serve as Division Councilor for Membership Services within the Society of Interventional Radiology. Within the ACR, I chair the committee on Appropriateness Criteria for Vascular Imaging and work with a team of experts in authoring documents that will be part of clinical decision support at ACR in the future.
